Ceramic Tile Care

**From the leader
in Total Surface
Solutions™**

... a complete system for surface preparation, surface repair and stain removal, protection and maintenance of glazed and unglazed ceramic tile, porcelain tile and grout surfaces.

Follow the simple steps below to beautifully restore ceramic tile floors:

PROCESS

Step 1: Surface Preparation

Deep scrubbing floor removes embedded soil from tile / grout. Prepares tile surface for repair and re-glazing.

Step 2: Stain Removal

Scouring crème removes stains from ceramic tile surface. Also gets deep into pores of grout to restore natural color of grout.

Step 3: Surface Repair / Surface Re-Glazing

Selected abrasives in convenient creme form will remove scratches in surface, restore and re-glaze ceramic tile. Brush action from POWER POLISH™ Brush & Pad Holder will remove embedded soils in grout. Rejuvenates entire floor surface.

Step 4: Surface Protection

Seals pores of grout while allowing vapor transmission. Keeps moisture from penetrating grout, preventing accompanying soil from staining and contaminating grout.

Step 5: Routine Maintenance

For daily, routine cleaning. Removal of greasy, sticky soil from floors.
